Sample Company IT Support Policy

Training sample — replace with your organization's approved policies.

Purpose

This fictional document demonstrates how a customer-support chatbot can retrieve information from department policy PDFs. It is not an official company policy.

Account and password security

- Keep passwords confidential. Never share passwords with colleagues.
- Use multi-factor authentication whenever available.
- If an account may be compromised, contact IT immediately. IT must verify identity before access changes.

Laptop and software support

- Use company devices primarily for approved business activities.
- Install software only from approved sources or with IT approval.
- For a slow laptop, save work, restart the device, and record error messages before contacting IT.
- Do not open unexpected attachments or links. Report suspicious messages to IT.

Wi-Fi, VPN and remote access

- Use the company's approved VPN when accessing internal resources remotely, where required.
- Never share VPN credentials or approve unexpected multi-factor authentication prompts.
- If VPN access fails, check internet connectivity, restart the VPN client, note the error, and contact IT if it continues.

Email and security incidents

- Report suspected phishing, malware, lost devices, or unauthorized access to IT promptly.
- Do not delete suspicious messages before IT advises whether they are needed for investigation.
